# Global Trends

#### Emerging trends

- 1. Macro risk environment shifts: 'No normal' is the new normal
- 2. Competition for investments heats up
- 3. Focusing on the larger benefits to unclog the pipeline
- 4. Asset management gets sophisticated
- 5. Technology rockets up the infrastructure agenda
- 6. Security becomes a mainstream issue
- 7. The gap between public and private narrows
- Innovative new ways to fund infrastructure emerging
- 9. The institutional debt market takes off
- 10. China and India have arrived

### 10 emerging trends in 2016

#### Trends that will change the world of infrastructure over the next 5 years

Barring a global economic meltdown or apocalyptic event, 2016 is already shaping up to be a year of growing momentum for the infrastructure sector.

The signs of this momentum are everywhere: in new sources of capital and new funding approaches that promise to unlock trillions of dollars in new equity and debt investment; in growing asset management capabilities, cyber security and public procurement, which are ushering in a real step-change in the way operators and owners manage assets; in the growing boldness of governments seeking to catalyze economic and social benefits; and in the growing alignment between the 'macro' needs of governments and the 'micro' decisions of consumers.

# Brazil

### Reasons for Optimism

- ➤ Pipeline of deals
- ➤ Market reforms
- > Financing package
- ➤ Set up of the PPI

## Challenges

- Market perception of Brazil
- Consequences of Lavajato
- Managing the problem projects
- > Financing
- Local supply market
- > Delivering on promises
